

**Warley Design Solutions reports on a successful year of growth**

Warley Design Solutions has posted encouraging results for the financial year 2009 / 2010. In what was undoubtedly a very tough economic climate, turnover has increased by an impressive 43% on the previous financial year, with an even greater increase in operating profits.

The results don't come as a surprise to Warley – with the continual slow-down in their “home” industry of Telecomms infrastructure they have worked hard to diversify their customer-base and have been successful in winning business in new sectors such as industrial, supercomputing infrastructure and defence.

Warley enter the new financial year in a strong position: with work-in-progress they are in discussion with existing clients about new and follow-on projects and additionally are in contact with new potential clients regarding some exciting opportunities.

All the signs are that Warley Design is set to meet its objective of continued growth through the coming year.
